For immediate release

Sync Link Kit

for Weber 32/36 DGV and

DGAV carburettors

Webcon are delighted to announce the launch of a Sync Link kit for the ever popular Weber 32/36 DGV and DGAV series of carburettors.

As standard, the carburettors are supplied with progressive throttle operation. This results in just the smaller, primary venturi being operated in light throttle conditions, and the larger, secondary venturi being progressively introduced as the throttle is opened further.

This is a perfect compromise of power and economy for road use, but with this type of carburettor

being used so extensively for many types of Motorsport, there is a requirement for both ventureries to open at the same time - a conversion that offers maximum power at all throttle openings.

Part number MT0098L is a purpose designed kit that includes all parts required for the conversion, including a new dual nozzle pump jet to ensure that the pump circuit supplies both primary and secondary venturis.

MT0098L is priced at **£44.99** plus vat
