

NEW FROM WEBCON

In tank fuel feed module for engine management systems

Webcon are delighted to announce the introduction of an OEM quality In Tank fuel feed module. With many new build vehicles such as kit cars being fitted with engine management systems, the issue of tank fuel supply has become a significant problem. Whilst it is currently possible to source external EFI pumps, swirl pots and tank senders individually, it usually involves 3 separate suppliers and the end result is often far from satisfactory.

The WFP096 tank supply module comes complete with high pressure pump, strainer, swirl pot and level sender, all in a neat, easy to fit housing. With no need to find space for large external fuel pumps or swirl pots, WFP096 will save valuable build time and is very competitively priced at just £117.50 plus vat.

Technical details such as dimensions, pressure, flow and sender resistances are available on a handy pdf which can be downloaded from our Website download area at www.webcon.co.uk/download-centre/index.html.

WFP096 is in stock now and available for immediate shipping.
